

## VPN Directions

You will be able to do it from any computer off campus.

1. From an external (non-NSHC internet connection) please go to the following website <https://vpn.nshcorp.org>
2. Log into the session with your usual domain credentials and select any connect client on the browser page that pops up on your screen.

This will scan your computer and install any vital components. This process may take up to 20 minutes to complete and it may appear to stall but just let it ride...

3. Once the application is installed, your vpn client should appear in the lower right hand corner. It may ask you where you want to connect to or it may auto-propagate. If it asks you please type in: vpn.nshcorp.org
4. You will then be asked for you domain credentials again.
5. After you have successfully created a vpn connection please start up Remote Desktop and type in the I.P. address of your computer that you need access to.
